

## SCDOT READY MIXED CONCRETE PLANT INSPECTIONS

Beginning on January 1, 2007, the South Carolina Department of Transportation (SCDOT) required concrete suppliers to submit a plant certification from the National Ready Mixed Concrete Association (NRMCA) for each plant proposed to provide concrete for SCDOT projects. Documentation also had to be presented showing that the inspector certifying the plant has completed the additional SCDOT related training provided by the Carolinas Ready Mixed Concrete Association (CRMCA) prior to the certification inspection.

With respect to the certification and re-certification of concrete delivery trucks, SCDOT requires “OPTION B” of the NRMCA truck inspection process. Therefore, all certifications and re-certifications of delivery trucks must be performed by a Certified Inspecting Engineer and not by the Company. In addition, SCDOT requires that all delivery vehicles be inspected annually instead of every 14 months.

For over 40 years, Rogers and Callcott Engineers, Inc. (R&C) has served the Carolinas with environmental services. During this time, it has worked with its ready mixed concrete clients to obtain air permits, conduct air dispersion modeling, deal with stormwater management issues, and provide laboratory services. Since 2005, R&C has been an Associate Member of the CRMCA and its employees have served on the CRMCA’s Environmental Committee and have spoken on environmental issues at CRMCA chapter meetings.

Besides offering environmental services to its ready mixed concrete clients, R&C is pleased to announce that it can now offer ready mixed concrete plant inspections for plant certification from the NRMCA to those clients that want their plants to be permitted to furnish concrete for SCDOT projects. R&C’s Inspecting Engineer, Dr. Ronald Dennis, P.E., and Inspecting Engineer’s Assistant, Anna Franklin, have met the NRMCA certification requirements for such inspections. Their names are listed on the CRMCA’s website ([www.crmca.com](http://www.crmca.com)) as an approved Inspecting Engineer and Inspecting Engineer’s Assistant.

To request a proposal or to arrange for a ready mixed concrete plant inspection, please contact Alan Hewett at 864-232-1556, Ext. 123, or [alan.hewett@rogersandcallcott.com](mailto:alan.hewett@rogersandcallcott.com).
